Treatment List

"The Science of Beauty - Love the Skin You Are In"

Welcome to the Cheshire Skin Clinic

The Cheshire Skin Clinic specialises in clinical treatments for the skin, hair and body using medical and cosmetic equipment from the largest manufacturer of pulsed light systems in the world.

The principle system in use incorporates Variable Pulsed Light, VPL™ and Radio Frequency (RF). These techniques are at the forefront of the industry. In particular VPL™ has evolved from laser technology into a more sophisticated area of expertise in order to deliver a sequence of rapid, controlled pulses of light energy to the skin for rejuvenation and improvement as well as hair removal.

Unlike other pulsed light devices available, the Ultra VPL™ allows the practitioner to select the energy, number, length and frequency of the individual pulses of light within each visible shot to suit the individual client – hence the term Variable Pulsed Light. This inherent flexibility of the system guarantees that all clients will be treated with the optimum individual settings for their skin and hair type.

Cheshire Skin Clinic VPL™ treatments are not invasive, and the unique variable pulses have been clinically proven to achieve fantastic results on a wide variety of skin imperfections and successfully treat unwanted hair. The variable pulses from the clinic's VPL™ system use this expertly innovated light energy to perform the treatments safely and easily, with none of the discomfort of invasive and/or surgical treatments.

Clinical Support

Cheshire Skin Clinic is run and owned by Dr. Angie Winnington-Sharp. Angie has specialised in treatments incorporating pulsed light for clinical applications for over 8 years and has a vast experience in training and education within this field, including work within private practice and the UK National Health Service.

Skin Treatments

Anyone looking to provide a non-surgical solution to treat the effects of ageing and sun damage should consider Cheshire Skin Clinic VPL™ treatment. Cheshire Skin Clinic has taken Intense Pulsed Light treatments to another level by using variable pulsed light (VPL™) - short, controlled pulses of filtered light - to safely improve skin imperfections.

Many skin conditions caused by ageing and sun damage can be treated using VPL™. Clinically proven to effectively treat a wide variety of conditions, VPL™ helps boost collagen production; improving the skin texture and tone whilst reducing fine lines and wrinkles. VPL™ also helps to minimise age spots, sun spots and pigmentation as well as treat thread veins and manage rosacea and acne.

Proven - The ULTRA VPL™ is used in over 3,000 clinics around the world, in over 60 countries.

Safe and Effective - VPL™ - was developed to provide more effective treatments than traditional (fixed pulse) IPLs™ and lasers. In addition to this, it greatly minimizes the potential side effects usually associated with treating darker skin types.

Fast - 2 ergonomically designed treatment applicators are used with the ULTRA VPL™. The 10 mm X 50 mm extra large spot size is one of the largest in the aesthetics industry, and that greatly minimizes treatment times - up to 4 times faster than most Lasers!

Clinically Proven - The Ultra VPL™ gives you more ways to tailor make each treatment for individual clients than any other system of its kind.

Cheshire Skin Clinic's VPL™ is clinically proven to effectively treat:

- Skin rejuvenation – improving wrinkles, furrows and fine lines.
- Thread veins, pigmented lesions, spider naevi and rosacea.
- Active acne and acne scarring.

"The Ultra VPL™ is the most advanced hair removal and skin rejuvenation system available today. Using state-of-the-art variable pulsed light (VPL™) technology, the Ultra VPL™ provides the power and flexibility you need to treat virtually all hair and skin types, while its simple touch screen display has been ergonomically designed for practitioners."

But how does it work?

Different structures within the skin react to specific wavelengths of light, this enables us to treat a variety of skin conditions, including the damage caused by ageing and the sun. The system is also able to target and treat age spots, freckles and pigmented lesions effectively. Due to the precision of the wavelengths used in the system it also has the inherent ability to target vascular lesions, acne, acne scarring and other dermatological conditions. Following treatments with the Cheshire Skin Clinic's VPL™ the skin will be left looking and feeling smooth, silky and radiant.

Hair Removal

The Cheshire Skin Clinic ULTRA VPL™ provides the most advanced professional hair reduction available today. The device delivers a changeable sequence of very rapid short pulses of light energy.

How does this work?

Ultra VPL™ emits light across a range of wavelengths, allowing a greater range of more gentle treatments to be performed on virtually all hair and skin types.

Hair removal with Ultra VPL™ is safe, easy and effective. The light energy from Ultra VPL™ is absorbed by the melanin in the hair, which heats up to a temperature that inhibits hair regeneration.

But how effective is the treatment?

Ultra VPL™ treatments are very effective, achieving outstanding results time after time.

Clinical trials have proved that the Ultra VPL™ produces consistent results on virtually all skin types, for a wide variety of skin imperfections and hair removal treatments. VPL™ is a safe, effective and virtually painless treatment, leaving customers thrilled with the results seen – this is what they say:

"I have noticed redness and sunspots on my décolleté. After my initial consultation with my practitioner I can see a significant improvement, even after just one treatment."
Elizabeth, 45

"Skin rejuvenation has made me much more confident, I don't feel my age and I feel much more confident about my skin. The adverts you see have all got people with the most wonderful skin, and now I feel mine is as good as any model's" Lynn, 64

"VPL™ gives me the freedom to not have to consider having my underarms or bikini area waxed. I can just pack a bag and go on holiday. It's one less thing I have to think about."
Christine, 30

"After just one treatment my shaving rash has gone!"
Mike, 42

Chemical Peels and Professional Products

At Cheshire Skin Clinic we provide the most advanced range of chemical peels available today. The peels are provided from the world leading Ses Laboratory and the medical range of professional products, for use in the clinic and at home, are produced by Agera RX. The range of peels offers some 'serious solutions' for acne, scarring, stretch marks, dermatitis, pigmentation, dry skin, anti-ageing, psoriasis, eye bags, cellulite and a host of other common, and more unusual, problems.

The peels and cosmeceuticals (a product that combines features of both a cosmetic and a pharmaceutical) used at the clinic include some of what is probably the largest range of AHA-based products available, and ranges in Vitamin C, Vitamin A, muscle relaxant products, face lifting products and the first and only 'truly' topical filler worldwide.

There are a number of different types of peels and range of professional products available at Cheshire Skin Clinic - an initial consultation will ensure that the ideal treatment is carried out for your skin type and problem. As with all of the peels that are available at the clinic, it is important to discuss pre- and post-care, and use any home-use products in conjunction with the peel for maximum benefit.
